DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C.

121:

- I. Claims 1-29, drawn to the use of a computer display menu for selecting a menu item, where the menu has a one-to-one correspondence to switches of an input device; classified in class 345 (Computer Graphics Processing, Operator Interface Processing, and Selective Visual Display Systems), subclass 168 (Display Peripheral Interface Input Device – Including Keyboards).
- II. Claims 30-37, drawn to generating a computer display menu, where the menu is generated from a menu database, a menu template, and a menu template modifier; classified in class 345 (Computer Graphics Processing, Operator Interface Processing, and Selective Visual Display Systems), subclass 825 (Operator Interface (E.G., Graphical User Interface) – Dynamically Generated Menu Items).
- III. Claims 38 and 39, drawn to reducing database memory storage requirements for computer display menu information; classified in class 707 (Data Processing: Database And File Management Or Data Structures), subclass 102 (Generating Database or Data Structure (e.g., via user interface)).

- IV. Claims 40-56 drawn to utilizing a plurality of menus, where a user selects a desired menu, causing a menu to be generated using a menu database, a menu template and a menu modifier, allowing a user to select a menu item from the generated menu, and causing an event to occur related to the menu item selected; classified in class 345 (Computer Graphics Processing, Operator Interface Processing, and Selective Visual Display Systems), subclass 744 (Operator Interface (E.G., Graphical User Interface) – Interface Customization).
2. The inventions are distinct, each from the other because of the following reasons: Inventions I, II and III, and invention IV are related as mutually exclusive species in an intermediate-final product relationship. Distinctness is proven for claims in this relationship if the intermediate product is useful to make other than the final product (MPEP § 806.04(b), 3rd paragraph), and the species are patentably distinct (MPEP § 806.04(h)). In the instant case, the intermediate product is deemed to be useful as a method (or article of manufacture, or system) to use an electronic appliance remote control (Group I), a method (or memory medium) to build a reusable computer display menu for multiple applications (i.e. a word processing application and a spreadsheet), and a method (or article of manufacture) to reduce memory usage for a computer display menu for small capacity devices such as a PDA; and the inventions are deemed patentably distinct since there is nothing on this record to show them to be obvious variants. Should applicant traverse on

Art Unit: 2178

the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions anticipated by the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
